Lock-In Wire Dividers

Acrylic Front Stop

Roller

Move Your Business Forward

The products in your glass display doors generate a large percentage of your profit. When the product is missing or hard to reach, you lose sales and profits. MiniRoller is the simple-to-install solution. MiniRoller is a gravity feed system that sits on your current cooler and store shelves to keep product moving to the front to the last item in the lane. No more empty facings or product stuck out of sight of customers.

MiniRoller Outperforms Other Shelf Systems

Glides often fail to move product forward leaving shelves looking disorganized, uninviting, and abandoned.

MiniRoller keeps product moving to the front every time until the last bottle or can in the lane.

Promotional roller trays sit high above the shelf, wasting valuable vertical cooler space.

MiniRoller's sleek profile means more room for more product.
